

WIND DATA APPLICATION

Software Tool that Standardizes & Quantifies Meteorological Data from Wind Energy

Axcend's Wind Data Analysis Application is the key to it...

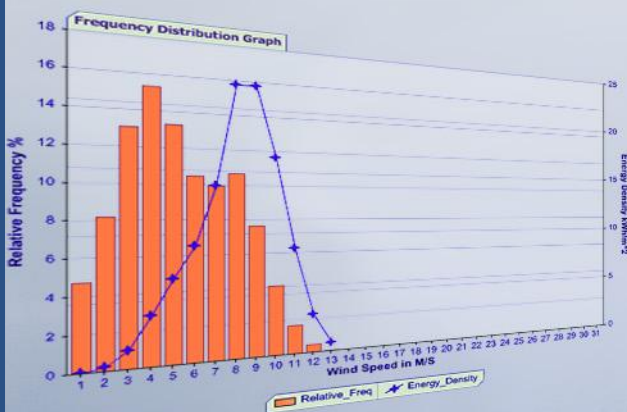

The wind data application is an online tool that allows the user to import data from different **data loggers from multiple vendors across locations** and provides more than 5 quality checks to mark & unmark data and **Statistical Algorithms** to patch the data.

Software Tool that Standardizes & Quantifies Meteorological Data from Wind Energy

Usability of the Application

- ▶ Professionals who are involved in analysis of wind data
 - Could use the application to identify invalid data, take up corrective actions by using statistical analysis methodology available in the application
 - Multiple corrective action for specific invalid data could be used which would help compare and select optimum methodology
 - Could generate reports and analyze the wind data based on historical and current data
 - Reduces the effort in doing the analysis of wind data and provides optimum result in no time
- ▶ Professionals who are involved in decision making on purchasing wind farms
 - Helps people to take informed decision based on analysis support available from the tool

Driving Business Benefits

- ▶ Reduces manual efforts by 60% thus decreasing delivery time & increasing delivery quality
- ▶ Automatic estimation of energy production assisting in prediction of the energy output

Axcend Automation & Software Solutions

An affiliate of Acrodex - a leading North American IT group, is an Enterprise Manufacturing IT solution provider focused exclusively on manufacturing & utilities sector; offering end-to-end solutions for an adaptive manufacturing environment. Serving clients since 2001, Axcend with its experience in industrial IT applications, have embarked on the product road to provide customers with a state-of-the-art wind energy application that addresses major needs of industrial users.
